

# Emierologium Astronomicum :

O R,

A Brief Description and Survey of the Year  
of Humane Rêdemption, 1672.

Unto which is numbred from years.

The Cre- } By the Oriental and *Greek* Christians 7180  
ation, } By the *Jews*, *Hebrews*, & later *Rabbins* 5432

The { African Christians, *Area Martyrum* 1388  
Turkish *Hegyra*, or Mahomers flight 1081  
Astronomers *Epocha* of *Nabon.* Egypt. years 2420  
Death of *Alexander* in Egyptian years 1996

Being the Bissextile, or Leap-Year.

And { Constitution of the *Kalender* by *Julius Caesar* 1717  
from the { Reformation thereof by *Gregorius* ——— 90

Whereto is contained (besides the state of the year)  
the Solar Ingresses, various Configurations, Aspects, Con-  
junctions of the *Planets*, and Eclipses of the *Luminaries* :  
With many useful, pleasant, and necessary Observations.  
Accommodated to the Meridian of *London*, whose *Zenith* is  
distant from the *Aequator* 51 deg. 32 min. and without sen-  
sible error, may serve for any part of *Great Britain*.

Whereunto is added, The Astrological Axioms and  
Theorems of *MORINUS*.

By Henry Coley, *Philomath.*

*I will behold the Heavens, even the works of thy fingers, the  
Moon and the Stars which thou hast ordained, Psa. 8. 3.*

London, Printed by *John Darby*, for the Company  
of Stationers, 1672.

To the Ingenious *Astrophilus*.

*A*Bout the latter end of the year 1669. I published a small Pocket-Companion, intituled *Clavis Astrologix*, in two parts; The first contained a brief Introduction to the Art of Astrology and Horary Questions, &c. In the second, was exhibited the exact method of Calculation of Nativities, with divers varieties therein, (as to Operation) not publickly known before: which Book finding so good acceptance amongst the industrious Sons of Art, hath encouraged me to appear (also) amongst the number of Annual Writers, hoping this may find no worse entertainment, which will animate me to make a farther progress for the future, (if God spare life) and communicate divers other things that may (I hope) be serviceable, and in all probability no less acceptable, both in Astrology and the Mathematicks. Thus not doubting of thy civil reception (which is all I expect or desire) till the next year. Farewel.

D July 17. 1671.

From my House at the farther end of Rose and Crown Court, near Baldwins Garden, in Grays-Inn-Lane, where those that desire it, may be instructed in several parts of the Mathematicks, and the Art of Astrology.

By

Henry Coley.

*In fiderali Scientia contemplator, & Veritatis amator.*

## A Definition of Astrology.

**A**strology is that Science (or rather Doctrine) which enquires out, searches, and discovers the power and effects of the Cœlestial Bodies (the Stars and Planets) which by their different heat, whereby various qualities are generated in the Air, they exercise, and influence upon all Inferiour Bodies, whence may be prognosticated and foreseen the Temperaments and Inclinations of Humane Bodies; as also divers Mutations in Sublunary Affairs, as being the Effects of Cœlestial Causes.

Now whereas *Astronomy* and *Astrology* have, by divers, been taken for one and the same Science; this is false, for there is between them this difference: *Astronomy*, as the Theoretical part, considers the motion of the Stars; but *Astrology*, as the Practick, weighs and considers, with Physicall Reasons, their Power, Influence, and Effects; — Or according to the similitude which *Kepler* useth, *Astronomy* may be accounted the Mother, and *Astrology* the Daughter; by Reason the latter is grounded upon and deduced from the former.

*Astra regunt homines, sed regit Astra Deus.*

The common Notes for this present Year 1672.  
According to the

Julian, or English }  
Account.

{ Gregorian, or new  
Account.

	I	The Golden Number.	I
♄	♄	The Dominical Letter.	♄
	II	The Epact.	I
February	18	Shrove-Sunday.	February 18
April	7	Easter-Day.	April 17
May	12	Rogation-Sunday.	May 12
May	16	Ascension-Day.	May 16
May	26	Whitsunday.	June 5
December	1	Advent-Sunday.	Novemb. 27

A Necessary and Perfect Rule for ever to know when the four  
Terms begin and end, and how many Returns are in each  
Term; as shall be noted in the following Kalendar.

1. Hilary Term beginneth the 23d of January, (if it be not  
Sunday, then the next day after) and endeth the 12th or  
13th of February, and hath 4 Returns.

Oſtabis Hilarii. | Crastino Purificationis.  
Quind. Hilarii. | Oſtabis Purificationis.

2. Easter Term begins 17 dayes after Easter, and endeth four  
dayes after Ascension day, and hath five Returns.

Quind. Pascha. | Mens. | Quind. Pascha.  
Tres Pascha. | Pascha. | Crastino Ascensionis.

3. Trinity Term begins the next day alwayes after Corpus  
Christi day, and endeth the Wednesday fortnight after,  
and hath four Returns.

Crastino Trinitatis. | Quind. Trinitatis.  
Oſtabis Trinitatis. | Tres Trinitatis.

4. Michaelmas Term begins the 23d of October, (if it be not  
Sunday) and endeth the 18th of Nov. and hath 6 Returns.

Tres Michael. | Crastino Animum | Oſtabis Martini.  
Men. Michael. | Crastino Martini. | Quind. Martini.

*Note that E stands for East, and W for West, from London.*

*A brief Poetical Description of the seven Planets.*

1. *Saturn* is called *Heavens Sitt-bearer*, the Father of the Gods, Patron of Time; and from his effects here below, Wise, Intelligent, Ingenious, the Seed of great Profundity, the Author of Contemplation, the imprinter of weighty thoughts in men, a destroyer and subverter of Power and Might, the keeper of hidden things, and the Author of finding and losing. *Saturn* causeth a complexion of colour between black and yellow, meagie, distorted, of an hard skin, eminent Veins, an hairy body, small eyes, eyebrows joyned together, a thin Beard, thick Lips, with looks cast down; an heavy gate, interfering as he goeth; besides, he inclines to wit and subtilty, but sometimes a way-layer and murderier.

2. *Jupiter*, so named of the Latines, *quasi Jovans Pater*, the Father of Liberality and Beneficence; he is otherwise called of the Poets *Magnanimus*, the Thunderer and Lightner, Invincible, Magnipotent, good natured, Fortunate, Honourable, the Author of Mirth and Judgment, the Revealer of Truth, Wise, the chief Judge, exceeding all Planets in goodness, the bestower of Riches and Wisdom. *Jupiter* gives a complexion of mixt Sanguine, betwixt white and red, of a delicate body, good stature, either bald, or else highforeheaded, Eyes somewhat big, short nostrils and unequal, the cheek Teeth somewhat big, a curled Beard, and sometimes deceitful, yet fair conditioned.

3. *Mars* is called *Mavors*, the God of War, (by the Poets) bloody, Armipotent, magnanimous, bold, unconquerable, full of generosity, of invincible power, of imperious presence, unresistable, a subverter of the strong and mighty. *Mars* gives a person of red complexion, a deep yellow hair, round visage, fiery eyes, a cruel and fierce countenance, by reason of his intemperate heat, insomuch as he is reputed hot and dry in the highest degree, and predominating over red choler.

4. The *Sun* hath divers appellations, as *Phebus*, *Apollo*, *Titan*, &c. fiery, golden, flaming, the Prince or Grand Seignior of the Stars; and denotes a person of good nature, fortunate, honest, prudent, intelligent, wise. The *Sun* is the governor

and

and disposer of life upon all bodies indued with Souls, obscuring the light of other Stars, and yet imparting to them all the light they have. The motions proceeding from him, are courageous, honourable, majesticall, considerate & wise. *Sol* gives a brownish colour, berwixt yellow and black, mixt with red, a low stature, yet of a comely personage, bald, curl'd, with yellowish eyes; and as touching the affections of the mind, sage, considerate, prudent, trusty, vain-glorious, and magnanimous.

5. *Venus* hath divers Epithets, as chief, mild, fair, bright, white, pleasant, powerful, fruitful, the Mother of Love and Beauty, the Progeny of Ages, the Mother of Man, she that first joyned both Sex together in love, the Queen of all joy, friendly, merciful, ever bountiful to Man-kind, she is called *Approdite*, because she is found in every mans sense & mind; and *Phosphoros*, or *Lucifer*, when she appears before the Sun in the East; and *Hesperus* when she follows the Sun: She inclines to mirth and pleasure, to sports, dalliance, dancing; she gives an amiable countenance, pleasant and merry, working a kind of whiteness in the body, by reason of her cold and moist nature, yet prettily mixt with red, a proper body, fair and round visaged, black rowling eyes, brown hair, of a lovely disposition, gentle, bountiful, courteous, affable, and gracious.

6. *Mercury* is called of the Antients, the Son of Jupiter, the Herald and prolocutor of the Gods, some call him Lightfoot, eloquent, gainful, wise, reasonable, strong, potent, convertible in nature, as Male with the Male, and Female with the Female; most fruitful, an Hermaphrodite; he inclines persons to inconstancy, to be mutable, yet strong, lively, prompt and ready. *Mercury* gives a complexion neither very white nor swarthy, but mixt, a long visage, a high forehead, small eyes, not altogether black, an even nose, and sometimes long, a thin beard, long and slender fingers; the operations he incites in the mind, is to be witty, subtil, busie, sharp, wary, and finickish.

7. The Moon was called of the Antients *Phæbe*, *Diana*, *Lucina*, *Proserpina*, &c. Queen of Heaven, the transporter of light from one Planet to another, Lady of rain and moisture: she inclines to mutability, beneficent, oblivious, yet curious. She gives a person of a pale complexion, intermingled with red, of a comely stature, round visage, and marked, blackish eyes, beetle brows, tender and soft flesh, the qualities of whole mind are sociability, facility, pensiveness, affectation of news, but no ready gift in discourse.

# January hath XXXI days.

Full Moon the 4th day, at noon.

Last Quarter the 11th day, at 11 at night.

- ♀ *Venus*, her Houses, *Taurus* and *Libra*.
- ☿ *Mercury*, his Houses, *Gemini* and *Virgo*.
- ☾ The Moon, her House, only *Cancer*.

♈ Dragons Head.

♏ Dragons Tail.

TO HIS  
Worthily much respected  
FRIEND THE  
AUTHOR:  
On this His Ingenious Sur-  
vey of the YEAR, 1672.

Hence Scribling Whiffers, with your Paltry  
Wares,  
Ill-shap'd Anatomies, Highways, and Fairs:  
Hush! To you, Men of Noise, that Tearly Blot,  
Three, or more Sheets, about you know not what.  
The Fair Urania, cannot but Disclaim  
Most of those Whimsies, you Vend in her Name.  
But when th' Industrious Coley's Book was shown,  
She Smild, and forthwith Christen'd it Her own.  
On then (Dear Friend!) Oblige us ev'ry Year,  
And study Heaven, till thou art Crowned there. )

Henry Care.

To

TO HIS  
Respected Friend  
THE  
AUTHOR.

**B**lest ! be the Morn of that great Day, whose Light  
Hath lookt up Darkness, and shont up our Night ;  
At whose Approach, Stars of great Magnitude,  
Their Splendor loose with greater Pulcitude.  
Do any Smite thee ? Or thine Honour wound ?  
Urania her self, shall them Confound :  
And prove to thee a Shield of such Defence,  
Shall Crown thy Head, and Clear thine Innocence.  
Thy Works are Learned, and so all Declare,  
Thy Noble Spirit, Judgment, Labour, Care.  
Go on, dear Friend, for nothing can Reflect,  
Upon thine Honour, only Disrespect :  
We'le Carp at Carpers, whilst thou dost Contract,  
The Soul of Art into an Almanack.

William Salmon,  
Phylomathes Med. Prof,

Caley, 1672.

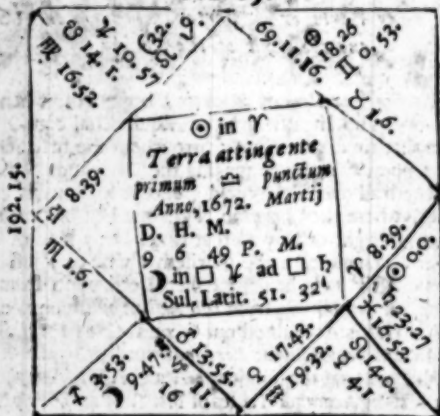

Of the Four Parts or Quarters of this Year 1672.  
and the first of the Spring.

**T**HE Spring (or Vernal Quarter) beginneth, when the ☉ makes his Ingress into the Equinoctial Sign  $\gamma$ , or rather at that time when the Earth toucheth the first Scruple of the Opposite Sign  $\pi$ , making the Days and Nights of equal Length all over the World (except some parts under the Poles, where they have no Night one half of the Year, or rather no Night or Day at that time, but a kind of Twilight) at which moment the ☉ riseth (with us) just East, and Sets exactly West, having neither Declination from the Equator, or Amplitude from the East or West points of the Horizon. This is Accounted our second Astronomical Quarter, and takes beginning at London according to the Rudolphine Tables, March the Ninth at 4 h. 22' P. M. But according to the most Accurate Tables of Mr. T. S. at 6 h. 49' P. M. which I prove thus :

	s.	d.	m.	s.
Long. ☉ ab. Equinox	00	00	00	00
Præcession Subtract	00	28	32	57
Remains Long. 1st. * of $\gamma$	11	01	27	03
Means Anomaly Corispond.	08	21	09	02
1672 Years, 1672 Subtract	06	12	52	07
Remains	02	08	16	55
March The month, March Sub.	01	28	09	04
Remains	00	10	07	51
9 Day Leap Year, 10 day for 9 Sub.	00	09	51	22
Remains	00	09	16	29
6 h. Hours 6 Sub.	00	00	14	47
49' Remains 41'	00	00	01	42
Equation add 8'				

Hence the true apparent time of the  $\text{Suns}$  Ingress by the Caroline Tables, appears to be as aforesaid March 9th. 6. 49' P. M. and the Position of the Heavens at that point of time, will appear as in this following Scheme.

102. 15.

282. 15.

It is very Probable, that others may make another Sign ascend at the *Suns* Ingress; and to affirm which is the true and real Position, will be found a matter very dubious, especially if it be considered what Curiosity is required in observing the *Suns* true place; for if there be but one minute mistaken in his Altitude (which is a fault rarely avoided) there will be as much in his Declination, and consequently two minutes error in his place, which doth give very near an hour in time: But presuming I have not altogether failed of my Expectation, in relying upon the former Foundation (which probably may be the best yet Discovered.) I shall therefore adventure from thence, to Extract a brief Astrological Judgment as followeth.

The Antients have taught, that there ought to be four Schemes erected, if a moveable Signe ascend at the Vernal Ingress; but here being no room to Enlarge, I shall content myself, therefore to speak from this present Position only, wherein I find all the Angles moveable, which intimates the Affairs and Designs of this Years Actions (as well as the Hu-

## RESULTS

## Coloz, 1672.

mours of People in general) to be very Mutable and Various: But there can be expected no considerable Alteration, by reason all the Planets except  $\Psi$ , are posited under the Earth. As the Full  $\circ$  preventional, the  $\circ$  was in  $\delta$  to  $h$ , and  $h$  in  $\delta$  of the  $\odot$ , Lord of the Ascendant; and at the New  $\circ$  postventional, the  $\circ$  was in  $\square$  to  $\delta$ . Again at this present Ingress, the  $\circ$  is in  $\square$  to  $\Psi$ , and hasts to a  $\square$  of  $h$  in the 6th. All which (in an Astrological sence) are Arguments of Ill to the Common People, and shews Vexations, and Afflictions of Body. They are therefore Cautioned to be exceeding careful of their Healths, for  $h$  is the 6th. and  $\delta$  in  $\square$  to the Ascendant, signifies violent Diseases: Yet  $\phi$  being Lady of the Ascendant, near the Cusp of the 5th. (the House of Delight and Pleasure) may signifie that (notwithstanding all Danger threatned) People will be much Addicted to prosecute their Delights, and Pleasures of all kinds this Year, though sometimes to their prejudice; for  $\phi$  is also Lady of the House of Death, and being disposed of, and in reception with  $h$  in the House of Diseases; gives timely Caution to beware of Surfeits, and such kind of Distempers, which may prove very dangerous to Mankind.

There is also prejudice threatned to small Cattle in general, yet I hope, the Year may Terminate much better than it began, by reason I find  $\delta$  so strong in the 4th. and Lord of the 2d. (which denores the substance of the People) there casting a friendly Trine Aspect to dejected  $\Psi$  in the 11th, the House of Hope. But I forbear to enlarge, being Limited, only desire those that are Artists (and able) to take the pains to direct the Ascendant, and Mid-heaven of this Figure, as directed Page 245. 2d. part of my *Clavis Astrologica*, and thereby I presume they may find much satisfaction as to the Alteration of Affairs, of the Year in general (*Viz.* The most probable times thereof) which may be one way not only to discover the truth of Astronomical Tables, but that measure of Time also.

*Now do the Birds begin to warble forth,  
Sweet Notes, to welcome Phœbus from the North:  
He to requite them, Decketh with rich Green,  
All Plants and Trees, which erst were Ruffet seen.*

Colap, 1672.

And by his quickening Vertue doth produce,  
A new Supply of all things for our use.

Of Summer.

Which taketh beginning this Year (according to the Rudolph Tables) on Monday, June the 10th. at 7 h. 25<sup>1</sup> P. M. But by the Caroline Tables, the same Day at 8 h. 34<sup>1</sup> P. M. At which Instant, fair Phœbus arrives to his greatest Meridian Altitude, and enters the Tropical Sign  $\Sigma$ , making (to all those Inhabitants that dwell on the Northern side the Equator) the longest Day, and shortest Night, (and the contrary to those that dwell on the Southern side the Equinoctial) he doth then arrive to his greatest Northern Declination, viz. 23 Deg. 30<sup>1</sup>; and at the same time, hath his greatest Amplitude from the Eastern, or western point of the Horizon, viz. about 40 Deg. Northward.

Now doth the Fields with Bearded Grain wax white,  
And Husbandmen o'rejoyed to see that sight,  
As Stungards, sleep not, make ye haste to Hay,  
While Titan beateth, work without delay:  
For careful Husbands that intend to Thrive,  
Must (like the Bee) bring Honey to the Hive.

Of Autumn, or Harvest.

Which commenceth when the  $\odot$  toucheth the first Minute of the other Equinoctial Sign  $\varpi$ , whereas the Earth at the same Instant, really enters the Opposite point  $\varphi$ , having her Axis parallel to the Sun, and objects it self to the equal portion of Light and Darkness, the Sun then Imballancing his Rays again with equal poysse, to all Terrestrial Inhabitants; which either way considered, fall out this Year according to the Rudolphine Tables, September the 11th. 22 h. 38<sup>1</sup> P. M. But by the Caroline Tables at 21 h. 35<sup>1</sup> P. M. the same day. The  $\odot$  hath now neither Declination, nor Amplitude, but begins his Declination Southwards, and

**Coley, 1672.**

and Decreases the Days to the Northern, and Increases them to the Southern Inhabitants of the Earth.

Now Sol from his Imperial Throne descendeth,  
And to th' Antartick Pole, his Journey bendeth.  
At whose departure, every Plant and Tree,  
For grief doth cast aside its Bravery:  
And sadly Mourning, cannot live, nor Thrive,  
Till he Return, and them again Revive.

**Of Winter, or Hyemnal Quarter.**

**W**inter, the last Quarter according to our English Account (but the first Quarter of the next Year Astronomical) takes beginning this Year according to the Rudolphine Tables, December the 10th. 10h. 30<sup>th</sup> P.M. But by the Caroline Tables, the same day at 10h. 40<sup>th</sup> P.M. At which moment, the ☉ touches the first Scruple of the Tropical Sign ♋ (For our Earth makes her greatest Obliquity to the Fountain of Life) thereby producing our shortest Day, and longest Night. And the contrary to those that live on the other side the Equator. Now the ☉ makes his greatest Southern Declination, and least Meridian Altitude, and at the same time attains his greatest Amplitude from the East and West points of the Horizon Southward.

See how the silly leafless Trees do Shiver,  
For want of Kingly SOL, their comfort Given.  
And how Dame FLORA (in her Mother Earth,  
Doth shroud her self from blasting BOREAS' Breath,  
And dare not Peep, until he back Return,  
To quench the Mortals, dead with Hyems' spurn.

Coler, 1672.

Of the Eclipses this present Year, 1672.

**I**T will be necessary first of all, for the Information of those Persons that are yet strangers to this kind of Speculation, to make a brief Description what an Eclipse is, and how the ☉ and ☾ come to be Eclipsed. Therefore take notice, that the Eclipse of the ☉ is nothing else but the shadowing of his Light from us, which is occasioned by the Interposition of the Gross and Opacous Body of the ☾, betwixt the ☉ and our sight, she being far more near to our sight than the ☉ is; which is never but at the Change of the ☾, so that the ☉ always in himself keeps his Light; but we the Inhabitants of the Earth, are deprived of enjoying his Beams, until the Body of the ☾ be removed from betwixt our sight, and the Body of the ☉. So that to speak properly, the Earth and not the ☉, is Eclipsed.

But the Eclipse of the ☾, is when the Earth is directly Opposed between the ☉ and the ☾, that the bright Beams of the ☉ cannot Shine or Reflect upon the Body of the ☾, by reason that the Earth doth shadow her, and so she continueth Eclipsed, either totally, or but in part, until she can quit her self of the shadow of the Earth; and this never happeneth but at the Full of the ☾.

Again, the Eclipse of the ☉, may be seen in some Countries more, and in others less, and in some not at all: But the Eclipses of the ☾ are Universal, and of like quantity and continuance to all that behold her, in what Country or Nation soever they dwell; only there is a difference of time when they begin, and end, by reason of difference of Meridians, either to the East or West; for to those that live 15 Degrees Eastward of us, the Eclipse beginneth and endeth sooner by an hour (according as we account time) and so an hour later to them, that live as much Westward.

But perhaps some may Object, Why is not the ☉ Eclipsed by ♀ and ♂, as well as by the ☾, since it is probable by the consent of able Astronomers, that they are both (likewise) below the ☉. To which take this Answer: First that

two Planets may be in  $\odot$ , so that a right Line issuing from the Eye, may directly pass by the Center of the one, and yet not by the Center of the other, which notwithstanding is required at an Eclipse; for we ordinarily see the  $\odot$  in  $\odot$  with the  $\odot$  (that is every New  $\odot$ ) when he is not Eclipsed at all. Secondly, The visible Diameter of the  $\odot$ , hath a Decuple proportion to the visible Diameter of  $\odot$ : Wherefore (according to Geometrical Demonstration) the visual Circle of the  $\odot$ , hath a Centuple proportion to the visual Circle of  $\odot$ , that is (in proportion) as a 100 to 1. whereby it cometh to pass, that  $\odot$  cannot by any means Obscure the Body of the  $\odot$ , although she were directly Interposed between our Aspect and the  $\odot$ , because she but only hideth the hundredth part of him, which is of no moment, and not to be discerned in so glorious a Body; much less (therefore) can be Eclipsed of  $\odot$ , seeing that his visual Diameter is far less, than the visual Diameter of  $\odot$ . But if it be further demanded, why then the  $\odot$  doth Eclipse the Body of the  $\odot$ , when yet she is so wonderfully much less than the  $\odot$ ? It is easily answered: For the reason is, because she is so very near the Earth, and so far distant from the  $\odot$ , insomuch that her visual Diameter seemeth unto us, greater than the visual Diameter of the  $\odot$ , and consequently the  $\odot$  greater than the  $\odot$ ; and therefore it is no wonder, that sometimes she should deprive us of his glorious Rays, either totally, or in part, so that he cannot be seen of us.

Four times this present Year, are the Luminaries Eclipsed from the Inhabitants of this Earthy Globe, whereof two are of the  $\odot$ , and two of the  $\odot$ , and but only one of the  $\odot$ , visible in our Horizon. The first Eclipse of the  $\odot$  (viz. the Middle time thereof) happens on February 18. 2 h. 55<sup>4</sup> 28<sup>11</sup> P. M. The second Eclipse is of the  $\odot$ , March 3. 2 h. 19<sup>1</sup> 28<sup>11</sup> P. M. The third Eclipse is of the  $\odot$ , August 12. 4 h. 48<sup>1</sup> 44<sup>11</sup> P. M. Visible, and appears Eclipsed about the Quantity of 3 Digits. The last Eclipse is of the  $\odot$ , August 27. 10 h. 9<sup>1</sup> 54<sup>11</sup> P. M.

Colley, 1672.

Coley, 1672.

The use of this Table is this, Turn to the *Calendar*, in the two last Columns of the Left-hand Page; and there you shall find the most forcible Aspects of the Planets, every day throughout the year: Which having found (one your proposed day) seek the same Aspect here in this Table, then consider whether it be in the *Spring, Summer, Autumn, or Winter*, and right against the time of the year in the Table, when the Aspect happens, you shall find the Inclination of the Air at that time; there needs no Example in a business so Plain and Obvious. But if any desire farther satisfaction in the (too oft uncertain) Conjecture of the Weather, let them peruse a small Tract, Intituled *Meteorologic*, sold at the *Raven in Duck-Lane*. In the next place, for the Satisfaction of Lovers of Art, as well as others, I shall here insert certain Astrological Axioms, and Theorems, grounded thereon from that famous Philosopher, and Astrologian, *John Baptista Morinus*.

As seven stream'd Nile, to whose kind overflow,  
The Egyptian Plains, their yearly plenty owe;  
Takes its first Rise from some small unknown Fountain,  
That Bubbles at the Foot of some steep Mountain:  
So whilst Arts spreading Branches mount a height,  
And with their Lustre, dazzle our dull sight:  
The Root whereon they All depend and grow,  
Lies couch'd in such brief Principles below.  
He that Peruseth these with piercing Eye,  
Views the Cable of true Astrologic;  
But if some Thick-scul'd Fopp, presume to sleep,  
And thinks they'r Nonsense, cause they are so deep.  
Let him set Down, and Plod on what b's Ready,  
And Learn with's Nails, to scratch a wifer Head.

—Operum Fastigia Admirantur  
Latent plerumq; Fundamenta.

EVERY Natural Science (as Aristotle himself witnesseth)  
owes its Birth & Original Discovery, either to the Senses,  
or to Experience: Which last is threefold, viz. Intellectual,  
Sensible,

Sensible, and Mixt or Rational, acquired not wholly by Sense, nor alone by Reason, but by the Concourse of both. Now since *Astrologie* is a Natural Science, and ordained for Practice, in like manner as the Art of *Physick*; therefore, as the one is, so the other ought to be Founded on Experiments. And whoever would deliver the Doctrine of *Astrologie* Scientifically, must heedfully observe what Rational Experience affords concerning it: For as the Science of *Astronomy* springs from the Apparencies of the Planets Motion beheld from the Earth in the Heavens; so *Astrologie* is built on the Effects, and Influences of the same Bodies, observed from the Nativities of Persons Born here below. And as one that should deny the Situation of the Stars, or their places as they are set down in the Tables by skilful Astronomers, must be sent to those Instruments, whereby their places are measured for Satisfaction; so he that shall deny the Principles of *Astrologie*, is to be referred to the Radical Figures of Natives, and their Lives, and Accidents correspondent therunto for his Conviction: For as we come to know not by any Reason, but only Sense, and sensible Experience, that Fire is hot, and the Attractive vertue of the Loadstone upon Iron, so that the ☉ doth effect one thing when in ♋, another thing in ♊, one thing when in ♈ of ♈, and a different when in his Opposition: As also one thing in the first House of a Figure, and another in the Twelfth, is a truth which only Rational Experience teacheth us. For though these Effects of the Caelestial Bodies have in those Bodies their Causes, and Principles, which are their formal Vertues, yet because these Vertues appear not to us, but only by their Effects, and that such Effects are to us the first means of Discovering such hidden Vertues: Therefore we ought to esteem them as the first Principles and Grounds of Teaching, and Learning *Astrologie*.

Note that the word *Axiome*, is to be understood, a *Maxime*, or general ground in any Art; or it is a Proposition, or short Sentence, generally allowed to be true: As in saying the whole, is greater than its part.

*Astro-*

*Astrological Axioms Confirmed, and Verified by Rational Experience.*

1. **T**He same Planet hath one Effect when in one House of a Figure, and another Specifick Effect when in another House, which is also true of the fixed Stars and Signs of the Zodiack.

2. In the same House of a Figure, the *Sun* by himself hath one Effect, the *Moon* another, *Saturn* another, &c. Which is likewise true of the fixed Stars, and the Twelve Signs.

3. The same Planet hath one Effect, when in Conjunction with another Planet, or posited in one House of a Figure, and a different Effect, when in Opposition, Trine, or Square, to such other Planet, or House.

4. The Square of *Saturn* or *Mars*, hath one Effect, the Square of *Jupiter* or *Venus* another.

5. The same Planet hath one Effect, when Lord of the first House, and another specifick Effect, when Lord of the Second, another when Lord of the Third, &c.

6. The same point of Heaven, if it be the place of the *Sun* in any Genesis, retains a Solar force and Influence in respect of that Native, as long as he lives, so *Saturns* place, a Saturnine vertue, &c.

In like manner the same point of Heaven, that is the Horoscope of any Nativity, shall still have an Influence over the Natives life; that which is the Mid-heaven, over the Actions and Profession, and so of the rest of the Houses; the same is to be said of the Planets, Aspects.

7. The same point of Heaven, which to one Native, is the place of the *Sun*, to another may be the place of *Saturn*, *Jupiter*, *Mars*, *Venus*, *Mercury*, or the *Moon*.

8. Every Agent Acting by it self, acts only according to its own proper Force and Nature.

9. Every Patient suffers according to its proper Nature, or whatever is received, is received according to the Capacity of the Receiver.

10. The same Remaining the same, always hath the same Effect, in, or upon the same Subject.

*From these Experienced Axioms, the ensuing Theorems comprehending (at least Generally) the whole Art of Astrologic, do necessarily follow.*

*Astrological Theorems.*

1. **T**he several Houses of a Cœlestial Figure, differ amongst themselves in Vertue, or Propriety.
2. The several Planets differ from each other in Nature, Vertue, at least Influentially.
3. The several Signs of the Zodiack, differ from each other in Nature, and Vertue, either Elementally, or Influentially, or both.
4. The several Aspects of every Planet, differ either in Vertue, or Quantity of Vertue.
5. All the fixed Stars, have not the same Nature and Vertue.
6. The Vertues of the Cœlestial Bodies, are mixt together in the Patient, or Subject, as Man, &c.
7. A Planet, in, or rather with the same Sign, hath always the same Specifick affect, as well Elementally, as Influentially.
8. No Planet hath the same Effect in divers Signs of the Zodiack, at least not both Elementally, and Influentially.
9. Two Planets do not severally effect the same thing, in the same Sign of the Zodiack.
10. The same Planet in the same House of a Figure, hath the same Effect.
11. No Planet doth the same thing from, or in several Houses of a Figure.
12. Two Planets have not severally the same effect, in the same House.
13. No Planet hath the same effect alone, as he hath when joyned to another Planet, by Body or Aspect.
14. The same Planet hath the same effect when ever joyned, in the same manner to the same Planet, or Cusp of a House.
15. No Planet produces the same effects being joyned to one Planet or Cusp, as it doth to another.

16. No Planet hath the same effect, when differently joyned to the same Planet or Cusp.

17. Two Planets have not severally the same effect, by the same kind of Aspects.

18. The vertue of the Houses of a Coelestial Figure, is not of it self, able to produce effects, but doth determine the vertue of the Coelestial Bodies, to such kind of effects as are agreeable to the vertue, or propriety of every House.

19. The Influence of every Planet in the causing, or producing effects, is of it self General, and Universal.

20. The Influence of every particular Planet, is in it self but one and the same, and not changed by his motion through the Signs.

21. No Planet restrains the Influence of another Planet, that it shall not flow forth, and Act on Sublunary things, though it may restrain its Elemental force.

22. Every Planet can have some effect on every kind of Body, naturally produced.

23. No Planet can do all things on every kind of Body, or effect of Corporal things, as Plagues, Deaths, Constitutions of the Air, Wars, &c.

24. The vertue (at least Influential) of two Planets, cannot be the same on any thing that is Born.

25. The same Planet, with the same Influential vertue, may at once cause divers effects, in relation to the same Numerical Native.

26. No Planet hath the same effect by its Influential vertue in subjects Specifically, or even only Numerically different.

27. Two Planets severally, do not (at least Influentially) produce by themselves, the same effect by the same Patient.

28. A Planet out of his own House, shall have one effect, by reason of the House of the Figure in which he is posited, and another, by reason of his Dominion in another House.

Coley, 1672.

To none but the Malicious Carper, and  
Calumniator,

**I** As Buzzard Kites, that ne're durst view the Sun,  
Go seek their Prey, as lately some have done :  
I fear them not, although they Bant and Bawl,  
Like Dogs against the Moon, that Bark and Yawl.  
Nor shall I, like a Snail, pull in the Horn,  
My Armour such, the Scorpions Sting, I scorn.  
He therefore still go on, and use my Pen,  
Maugre the spight of such Majestick men.  
Yet (woman like) let's not go Scold for shame,  
Least Standers-by judge, both may be to blame :  
But rather Mend, and thereby merit Praise,  
For Good Wine needs no Bush, its Fame to Raise.

I aim at none, but those that Carp at me,  
If none such are, these Lines shall silent be.

Rympatur quisquis, Rutopitur Invidia.

FINIS.
